Data
Every cycle
Decisions
Operators
Borg CR-10 rating at each break
Borg ratings
Every break: rotation
which operator works on which loop in the next block (measured exposure, Borg rule)
exposure forecast
MotionSuit
REBA score per task execution
Task estimates
time, REBA and energy of each task (Eq. 5.1 and 5.2)
initial values as prior, updated with each measurement
estimates
Start of shift: balancing
plan for the headcount of the day; MILP solved again only when needed
assignment
loops
Smartwatch
energy per operator per cycle
Assembly line
operators work on their loops
new measurements every cycle
